

Embedded Systems Labs with EPOS and EPOSMote

The following labs (exercises) aim at guiding students towards their first contacts with embedded systems development. Labs are proposed in growing complexity ordering, initially using the platform at bare metal and slowly introducing EPOS. After going through the labs, you might want to check the [EPOS Makers](#) section for more advanced projects.

Exercises

1. [Led Blinking](#)
2. [Light Keyboard](#)
